

A hard-working, analytical computer scientist with over a decade of experience who values leadership, ingenuity, diligence, and education. The best things in life are great documentation, easy-to-use software, and easy-to-work-with people.

Experience

Senior Backend Software Engineer (Access Control)

Lead major product feature initiatives that enabled teams to collaborate within Webflow more effectively and increase adoption on the website experience platform: introduced workspaces, roles & permissions, service provider guests, and content editor specific use-cases.

Senior Backend Software Engineer (Collaboration)

Lead major product feature initiatives that enabled teams to collaborate within Webflow more effectively and increase adoption on the website experience platform: introduced workspaces, roles & permissions, service provider guests, and content editor specific use-cases.

Webflow

April 2021 - June 2024

3 years, 3 months

NodeJSReactJSTypeScriptMongoDBAuthorization

Senior Backend Engineer

Fostered development and cross-team collaboration on backend microservices, with an emphasis on leadership, mentorship, and being a force-multiplier for the team. Architected and launched a solution with a 3rd-party integration for digital direct deposit, before taking a deep dive into Simple's infrastructure to build out a new self-service oriented infrastructure platform designed to reduce overhead of maintaining legacy home-grown infrastructure tooling and drive the Engineering organization towards more modern dev ops practices.

ScalaJavaAWS RDS PostgreSQLConcourseGitHub ActionsTerraformBOSHCloud Foundry

Backend Engineer

Developed and maintained backend microservices (Scala, Java, with AWS RDS PostgreSQL), contributing to company wide initiatives around one of Simple's key product features (protected accounts and savings tools). Lead architectural changes for the same products, and stewarded the adoption of Jira and agile based workflows.

Simple Finance

April 2018 - September 2019

ScalaJavaAWS RDS PostgreSQL

Software Engineer (Backend Java)

Focused on developing the Jive platform (Java, Spring, Struts 2) and related components of Jive's next-generation architecture, including microservices (built with Dropwizard, Guice, Hystrix, JUnit, and ReactJS) that leverage AWS offerings (S3, RDS, DynamoDB). Practiced Agile (Scrum) and continuous integration (Git, Stash, Jenkins) development methodologies.

Jive Software

June 2017 - March 2018

9 months

JavaSpringApacheStruts 2DropwizardMaven

Software Engineer (Tools)

Focused on developing customizations to the Jive platform using the Jive plugin framework. Built a microservice to support plugin and add-on customizations using full Javascript stack that integrated with 3rd party applications such as Salesforce, JIRA, and PagerDuty. Practiced continuous integration development and was responsible for product management and project management for these tools.

Extracting Episodic Memory Feature Relevance Without Domain Knowledge

BICA 2011

December 2011

Episodic memory provides many important capabilities to a cognitive architecture. One of the challenges of creating a general episodic memory system is to be effective when given no information about the agent's task. In this paper, we present an effective algorithm for detecting the relevance of the features of episodic memories while only being told when an agent completes a goal. We demonstrate this algorithm using an episodic learning agent in a task that provides the agent with a mix of relevant and irrelevant features. The episodic learner outperforms a variant Q-Learning algorithm that has proven effective in the past.
